Crypto is reshaping the future.

Trustlessness > Trustworthiness. However,
the ICO Crowdfunding Industry
is currently drowning in scams.

Less than 5% of ICO projects succeed,
but over 80% of all money raised in ICOs
goes to successful projects.

The Unsinkable ICO Standard (TUIS)
provides nearly trustless tokenomics
to help investors find trustworthy projects.

TUIS-compliant assets are Unsinkable.
They cannot trade below ICO price.

Unsinkable assets are backed
by the crowdsourced buyback fund,
and are always redeemable for ICO price.

UNSK provides outstanding reward/risk
potential for XLM holders.

Unsinkable ICO low-price guaranteed.
Investment-back guaranteed.

XLM wallets require a minimum balance of .5XLM to show up on the Stellar network.

If you need to create an XLM wallet you can generate the keypair at

<https://www.stellar.org/laboratory/#account-creator?network=public>

and fund the wallet with a Binance withdrawal. Most exchanges should work, they utilize the “create wallet” operation. You should verify with a withdrawal of 2 XLM.

Participating consists of a trust operation and manage offer operation.

Until price-lock HODL is available in the HODL Wallet, The Unsinkable Project can only generate usable funds from PICO UNSK investment. Let's make crypto beginner-friendly. [Unsinkable.io](https://unsinkable.io)
